What is a Database?

Today I’m going to rock your world by showing you what a database is.

Now according to this dictionary, a database is...

Oh you know what forget about that, I’m just going to show you.

A database is like a ginormous pile of sh...stuff, that can be used for your assignments.

They have articles, videos, books, images, reports – all from published sources.

You might think that database searching is like a Google search and you would be right but there are some really important differences.

First, the library pays thousands of dollars per year for high quality, online information.

Which is cool right? Well it’s useful anyway!

And, you don’t have to sort through advertisements for “weight loss products” or online “casinos”.

And remember internet information can be contributed by just about anyone with an internet connection ... Meow!

When you use the high quality, reliable and trusted information your teacher's gonna be impressed.

So where are these databases hidden? On our library homepage.

See this tab? Click on this.

If you need scholarly articles where do you go? I don't hear you!

Right a library database! And why do you go to a library database?

Right again! To get high quality results.
